Writing stories and tasks

EX1

THEME: Whislist

EPIC: As a customer, I want to be able to have a wishlist so that I can come back to buy products later.

STORIES: 1) As acustomer, I want to be able to save a product in my wishlist so that I can view it later.

Acceptance Criteria: Given that I am a customer, when I click “Save to wishlist” button then the app should save that product in a whislist.

2) As a customer, I want to be able to view my wishlist so I can buy items from it.

Acceptance Criteria: Given that I am a customer, when I click “View wishlist: button then the app should show me all the products in my wihslist.

TASKS: 1) Create “Add to wishlist” button on all products.

Add an “Add to wishlist” button on all products pages near the price. The button should have the style shown in the attached mockup. Onced pressed, the button should add the current product in the user’s wihslist.

2) Create new DB table for wishlist

Create a new table in the app’s database, that will save productID’s and will have a userID also as a PK.

3) Create page to display user’s wihslist

Create a new page that contains the products added by the user in wishlist. This page will be accessed after the “View wishlist” link will be pressed.

4) Add “View wishlist” link to homepage

Add a “View wishlist” link on the homepage, in the right corner, next to “Account” profile. When pressed, the user will be sent to the wishlist page which contains all products he selected to add in wishlist.

THEME: Login

EPIC: As a user, I want to be able to login into my account and recover my password if needed, so that I can have access to personalized content and manage my account.

STORIES: 1) As a user, I want to login into my account with an email/username and a password, so that I can have access to the site.

Acceptance criteria: Given that I am a user, when pressing “Login” button after I enter my email address and the password, then a verification link should be sent to the email address, and after pressing the “Verify your account” link, I should be able to enter my account.

2) As a user, I want to be able to create a new password via email if I forgot the old one, so that I regain access to my account.

Acceptance criteria: Given that I am a user, when I press “Forgot password” button, then a new link will be sent to the email address I registered for the account, where I can create a new password.

TASKS: 1) Create “Login” button

Add a “Login” button on the top right corner of the homepage. The button should have the style shown in the attached mockup. Once pressed, it should redirect me on the login page, where I need to put a valid email and password to access my account, and then press a new “Login” button to enter the account.

2) Create a login page

Create a new page where I will be redirected after pressing the “Login” button. Here I must introduce my email and the password and then press a new “Login” button to enter my account. If the credentials are not valid, an error message must appear in which will be written “email or password is invalid”.

3) Create a “Verify your account” link

On the first login, a verification link called “Verify your account” must be sent to the email address. After pressing it, a message should appear that confirms the validation.

4) Create “Forgot password” button

Add a “Forgot password” button under the “Login” button on the login page. The button should be the length of the email/password field. Once pressed, I should be redirected to a new forgot password page.

5) Create a new forgot password page

Create a new page where I will be redirected after pressing “Forgot password” button. Here I have to introduce the email address where I will receive the password reset link.

6) Create “Reset your password” link

Create a “Reset your password link” which will be sent to the email address typed in the email field on the forgot password page. After pressing the link, I should enter a new page where I have to type and save the new password I want to use on a “New password” field, and retype it in the “Confirm your password” field.

7) Create reset password page

Create a page where I will be redirected after pressing “Reset your password” link where I will type and save the new password.
